DETAILED ACTION

1. This Office Action is response to Applicants' AMENDMENT filed on 10/02/2006.
2. Claims 2, 3, 12, 23 and 24 have been cancelled.
3. Claim 28 has been added.

EXAMINER'S AMENDMENT

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Chunhsi Andy Mu (Reg. No. 58,216) on WED. 10/25/2006 and FRI. 11/03/2006 at 202 824-3000.

The application has been amended as follows:

Claim 1:

1. (Currently Amended) A computer-implemented method for managing data in a list, the method comprising:

creating a list having an item type and a relationship type, wherein the relationship type corresponds to a relationship between items in the list;

generating a list entry template based on the relationship type, wherein the list entry template includes one or more item properties associated with the relationship type;

Art Unit: 2162

generating a list entry, in accordance with the entry template, representing the relationship between an item and a root list item, wherein the list entry comprises the one or more item properties specified by the list entry template;

adding the generated list entry to the created list;

storing the list in a memory of a data processing device;

changing a location of the item; and

updating the entry to refer to the changed location; and

displaying information based on the created list.

Claim 13:

The first line of claim 13, "The system of claim 12" replace with "The system of claim 11".

Claim 28:

28. (Currently Amended) A computer-implemented method for managing data in a list, the method comprising:

creating a list having an item type and a relationship type, wherein the relationship type corresponds to a relationship between items in the list; and wherein the list is a file in XML format;

generating a list entry template based on the relationship type, wherein the list entry template includes one or more item properties associated with the relationship type;

Art Unit: 2162

generating a list entry, in accordance with the entry template, representing the relationship between an item and a root list item,

wherein the list entry comprises the one or more item properties specified by the list entry template, wherein the one or more item properties is metadata associated with the item, and

wherein the list entry is a non-holding reference to the item associated with the item type;

adding the generated list entry to the created list;

storing the list in a memory of a data processing device;

updating the generated list entry, wherein updating the generated list entry includes serializing a shell link to the non-holding reference; and

displaying information based on the created list.

5. Claims 1, 4-11, 13-22, and 25-28 are allowed.

Allowable Subject Matter

6. The present application has been thoroughly reviewed. Upon searching a variety of databases, the examiner respectfully submits that claims 1, 4-11, 13-22 and 25-28 are allowed in light of the applicants' argument and in light of the prior arts of made record.

The following is an examiner's statement of reasons for allowance:

The claimed invention is directed to a method, system and computer-readable medium having a computer-executable component for managing data in a lists, which is a list of a set of items defined by a root item, a direction, and the entry relationships with that root item in that direction. A verb is an action that may be performed on the items in the list and includes among others, move, copy, add, remove and delete. The actions performed on the items include actions performed on the entry relationships between the item and the root item. This invention is to provide to the use with alternative ways to access items other than through another folder or in a certain order.

The closest prior arts, Pub. No.: US 2003/0227487 A1 of Hugh teaches creating a list of data items such as word processing documents and other working files, creating a list having data items and relationship and generating entry template. And US Patent No.: 6,243,724 B1 issued to Mander et al. (hereinafter Mander) teaches storing various documents in a memory and including information concerning the documents and piles in the computer's filing system.

In combination, Hugh and Mander fail to teach "changing a location of an item and updating a list entry to refer to the change location, ... moving an item to a second list ... the second list's relationship type has in common with the first list's relationship type." (see applicants' Remark dated 10/02/2006: page 8, the last paragraph and page 9, the first and second paragraph).

These distinct features, in conjunction with all other limitations of the dependents and independent claims render claims 1, 4-11, 13-22 and 25-28 them allowable.
